Start Strong. Finish Even Stronger.

Adding feeding and finishing options to your imagePRESS V900 Series, imagePRESS V1000, or imagePRESS V1350 production color digital press can be essential to maximizing versatility and flexibility when producing high-quality, professional output. With Canon and third-party scalable, automated, in-line equipment, you can deliver brochures, manuals, reports, books, and so many other materials.

PROFESSIONAL BOOKLET-MAKING

The combination of the productivity, quality, and versatility of the imagePRESS digital press with the capabilities of the Plockmatic BLM50/35 and BLM5000 Series allows print providers to offer full-bleed, professionally bound, high-quality booklets with a high page-count. The 200-page booklet capability helps enable in-plants to secure more jobs internally while also allowing commercial printers to expand their offerings to a wide range of customers.

CORNER STAPLING AND BOOKLET MAKING

Canon's optional staple and booklet finishers offer corner stapling up to 100 sheets¹ and saddle-stitching up to 25 sheets.¹ Add face side and top/bottom trimming options to create full-bleed booklets in-line. Increase the value even more of the final printed piece by adding the optional SDD Square Fold Booklet Maker to create lay-flat professional booklets.

TWIN LOOP BOUND BOOKLETS

The GBC eWire Pro works in-line with the Multi Function Professional Puncher to automate twin-loop-bound booklet production up to 100-sheets¹ in size. Its compact footprint offers smaller print shops spool-fed production benefits without the hassle of manual binding with precut wire elements. And with various wire sizes in black, white, or silver, customers can tailor the solution to their application.

INSPECTION UNIT

The Inspection Unit can help eliminate the time and cost of manual review by automatically examining each sheet for dust, stains, streaks, and other flaws with adjustable precision levels. And it can automatically reprint flawed sheets for a full stack of professional-looking output.

HIGH-CAPACITY STACKING

Canon's high-capacity stackers can straight or offset stack up to 6,000 sheets¹ and be unloaded during long print runs for minimal intervention and maximum productivity. There's also an optional, battery-powered, ergonomically designed PowerLift dolly to assist with the unloading and transporting of large, heavy stacks to the next step in the production workflow.

PERFECT BINDING

In-line perfect-binding solutions help to broaden the scope of books that can be printed in a single run. The Canon Perfect Binder offers in-line perfect binding of up to 200-sheet¹ books with three-side trimming (in a compact footprint), adding high-value capability to Canon's production color presses while retaining other in-line functionality.

SENSING UNIT

The Sensing Unit can monitor and adjust front-to-back registration and color accuracy before and during production, continuously adjusting on the fly. The powerful features of the imagePRESS V Family engines work to deliver a high level of automation for color consistency, accuracy, and predictability—all while maintaining productivity.

LONG SHEET FEEDING

From six-panel brochures and creative marketing collateral to book covers and posters, the BDT VX 370-790 and POD Deck Lite XL long sheet feeders can provide print buyers with a versatile range of innovative print applications. A combination of reliable paper feeding and registration with imagePRESS image quality technologies on a wide range of substrates can assist you in offering new applications.

PAPER-FEEDING MODULES

Canon production presses offer streamlined solutions for paper-feeding, with each option designed for productivity and versatility. From enhanced air-assist to air separation and vacuum feeding technologies,² Canon's optional paper-feeding modules can help ensure reliable feeding and high productivity. They are also equipped with multi-sheet detection³ where these unwanted sheets are diverted to a purge tray to maintain productivity and not requiring immediate operator intervention.

imagePRESS V1000 shown with optional accessories.

PROFESSIONAL PUNCHING

With numerous interchangeable dies, the Multi Function Professional Puncher provides high-volume, durable, and versatile single and double punching. The optional crease die can be added to improve the appearance of saddle finished booklets by helping to minimize toner cracking on the fold. And the perforating dies can help to bring efficiency to important tasks while helping to offer a wide range of services to your clients.

¹ Capacity based on 20 lb. Bond

² Available on the POD Deck-E1

³ Available on the POD Deck-E1 and Multi Drawer Paper Deck-E1
